

How to export the cluster .kube/config file?

1- Login in AWS using the CLI first with your secret and access key

```
$ aws configure
AWS Access Key ID [None]: XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
AWS Secret Access Key [None]: XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
Default region name [None]: XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
Default output format [None]: #you can just hit enter and leave it blank
```

2- Run the below command to export the .kube/config file in your home directory

```
$ aws eks update-kubeconfig --name [cluster_name] --region [region]
Example: aws eks update-kubeconfig --name devops-catalog --region us-east-2
```
